

# EXTENSION BRACKET

The extension bracket is an external wrap-around solution that you fit onto the post and add a tube inside to build high walls. It's available in two versions, one to fit the 60x40 posts and one to fit the 80x80 posts.

The bracket is fixed in its position with 4 screws, creating a strong and stable solution.

The extension bracket is the only solution that will work together with hot-dip galvanized posts.
