

POLYCARBONATE INFILL

Use polycarbonate as infill to get a clear view of the hazardous area. The PC-sheet provided by Troax is a 5 mm clear polycarbonate that is cut to size from a 2050x3050 mm sheet as maximum size.

The polycarbonate sheets can be used as infill in combination with mesh or other combinations to create your requested solution.

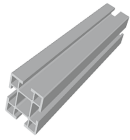

Polycarbonate sheets of 3-5 mm thick can be used as infills, and they are fixed to the frame either by using the zinc panel lock for polycarbonate or steel sheets, or the securing strips in black plastic for the PC sheets.
