

# PADLOCK

Our proposed padlock for a cellar storage unit is the Anchor 820-2, a grade 3 padlock. It can be used for all three systems Classic, Medium and Safe.

We can also provide the grade 4 padlock version, Anchor 800-3, which normally is used for the Garage Safe system.

The picture describes the padlock measurements compatible with the securing plates on the doors. The most important is that the shackle inside width must be between 24 and 28mm to fit all Troax Padlock doors.
