

RACK PROTECTION

The Rack protectors provides a good protection for pallet rack posts against an accidental collision with a forklift or moving pallet load unit. Our products are made of high-quality steel, while maintaining the requirements of health and safety in European norms. Protectors are most often mounted to the floor with mechanical or chemical anchors. If you hit the protector, it absorbs the impact energy and the pallet rack remains undamaged, due to it not installed on the rack, but in the floor with a distance to the pallet rack.

Our robust (well visible) Rack Protectors are available in several different models and sizes.

Upright protectors

Thickness: 4 mm / 5 mm

Height: 400 mm

Color: Yellow RAL 1021

Rack end protectors

Height: 400 mm

Length: 1200 mm / 2400 mm
